education

UNIVERSITY OF MINNESOTA (2001 - 2006)

BA Mathematics | Minor: Italian

NASHVILLE SOFTWARE SCHOOL (2016 - 2017)

Full-Stack Software Development

projects

JUXTA-POSITION | m-tambo.com/juxta-position

A side-by-side player comparison tool for fantasy football enthusiasts. Stats, projections, news and rankings were collected by making HTTP calls to multiple APIs. The data was handled and arranged with AngularJS, ChartsJS and JQuery. Users have the ability to register, login and save data, using Firebase behind the scenes. Materialize offered a sleek, minimalist styling. Angular's route params were employed to pass variables between URLs.

ENSEMBLIST | github.com/m-tambo/ensemblis

A social media app that brings professional freelance musicians together. This application seeks to connect musicians by allowing them to create a gig and invite nearby pros to collaborate with them. A full-stack web app built with NodeJS, ExpressJS, AngularJS and Bootstrap. The server-side database was made in PostgreSQL and maintained with the Knex/Bookshelf ORM.
